Defibrillation Update Course

COURSE TITLE **Defibrillation Update Course**

DESCRIPTION

Cardiac Arrest is the biggest killer in this country. Over 150,000 die as a result. Many could have been saved if a defibrillator was made available. Automated External Defibrillators (AED's) are now becoming more common throughout a range of workplaces.

A casualty's survival rate will dramatically increase if an AED is available and if you have appropriately qualified personnel to use it.

This annual update course is designed for those who have already undertaken a One-day defibrillation course and require updating to ensure that their skills are maintained.

This is a suggested minimum requirement for re-qualification and all trainees should be encouraged to update on a more regular basis without necessarily the formal assessment at the end.

Scenario training with the use of an AED should be encouraged as often as possible.

DURATION

A 3-hour course consisting of an update on theoretical and practical work including an assessment at the end.

SYLLABUS

A range of subjects is addressed including a re-cap on:

Primary survey

Resuscitation

AED functions

AED practical scenario

Troubleshooting

Heart Attacks and Cardiac Arrest

Chain of survival

Defibrillator protocol

Safety rules for the AED

Maintenance

CERTIFICATION

There is an assessment at the end of the course including CPR and the practical use of an AED.

This qualification is valid for a further 12 months.

NUMBERS

A maximum of 8 students can be accommodated on this course and evidence that each student has previously attended a One-Day Defibrillation course is essential

LOCATION

We are able to deliver this course on your site, subject to a pre-course assessment of your premises, reducing your costs in respect of additional time out and travelling.

If you only have a small number that need training, then have a look at our course-finder facility which may offer you a local course that you can join.
